DETAILED ACTION

- This action is responsive to the following communication: RCE filed on 9/18/2008.
- Claims 1, 4-9 are now pending; claims 2-3 have been canceled.

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 9/18/2008 has been entered.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 7-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 7-8 recites the limitation "said network interface". There is insufficient antecedent basis for this limitation in the claim.

Response to Arguments

Applicant's arguments, see pages 4-5, filed 9/18/2008, with respect to claim 1 have been fully considered and are persuasive. The prior art rejection of claim 1 and its dependent claims has been withdrawn.

Allowable Subject Matter

Claims 7-8 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action. Claims 1, 4-6, and 9 are allowable.

- The following is a statement of reasons for the indication of allowable subject matter:
:The cited prior arts (US 5754308 to Lopresti et al; US 6330976 to Dymetman et al) of record teach an image forming apparatus a scanner for scanning documents and to retrieve stored documents from remote computer system via using printed barcode on a document, but the prior arts of record fail to teach and/or suggest "the document being printed with a document content and a plurality of coded tags, each tag encoding an identity of the document and the position of that tag on the document, the scanner incorporating a sensor for sensing the coded tags; means for transmitting the document identity and tag position of a sensed tag to a computer system networked with the copier, the computer system identifying a digital version of the document from the received document identity and determining user input on the scanned document using the received tag position" and in combinations of other features in the claims as cited in independent claim 1.
